410 GSX Spray Applicator

Spray Applied Process: Save time material and labor costs and complete projects up to 4 times faster versus other methods using the Garlock Spray-Applied waterproofing system.

Low temperature application: Work more safely by spraying material at temperatures below 260 degrees or less which is classified as Cold-applied in most regions. Eliminates compliance with regulations normally associated with Hot-Applied membranes.

Productivity: Spray longer without stopping to add product with the 410 gallon large capacity GSX spray applicator.

Rugged Design: Experience long term performance, lower cost of ownership and operation with the GSX heavy duty design and construction, engineered for the rugged job ahead.

Diesel Heat and Digital Control: For maximum safety and fuel efficiency, all GSX applicators utilize a fully enclosed chamber diesel heat system. The unique Double boiler design is oil jacketed for indirect heating. Keep product at the precise temperature for application with the on-board digital system with automatic control of application and melter temperatures.

High-Performance Mixing- Eliminate temperature stratification with the specially designed Auger/Agitator. Unobstructed Internal Machine Recirculation ensures unsurpassed heat up and recovery times. Reduce downtime with the heavy-duty pumping system.
